# How ENGAGE works

**For clinicians and care coordinators,** with the Orbita ENGAGE solution you can remotely monitor patient progress against individual care plans. Personalised patient content can be created and delivered

**For patients,** ENGAGE easily tracks and assesses progress in wellness goals and treatment plans, even if they are not "tech savvy". Data is collected using smart device integration, to easily record vitals, complete surveys and input wellness information.

**For family, friends and caretakers,** communication and care coordination support that is simple, with easy-to-use secure mobile and web applications.

ENGAGE provide easy to access, relevant content to the care team and patients to inform, educate and encourage. It offers the ability to respond to notifications, trends, data anomalies and important events. Assessments are enhanced through creation of digital surveys for smartphone, tablet and voice applications.

## Smart alerting: Providing an extra layer of care

## Key Features

- Care plan management - tailored care journeys with Goals, Tasks, and Alerts
- Dynamic patient's care plan adaption based on limits and targets
- Smart content curation & delivery, and survey builder (web, mobile, voice)
